Guillermo Cañete

Tierra del Fuego, Argentina

QUALITY & PROCESS IMPROVEMENT SPECIALIST | SOLVING OPERATIONAL PROBLEMS THROUGH DATA, SIMPLIFICATION & DIGITAL TOOLS

guillermo.canete@hotmail.com +54 9 2964 413910 linkedin.com/in/guillermo-canete guillermocanete.github.io/cv/

PROFESSIONAL PROFILE

Quality & Process Improvement Specialist with 14+ years identifying shop-floor problems, finding root causes, implementing practical solutions, and leaving systems better than before in complex, high-reliability manufacturing (Motorola, Samsung, Huawei, Sony, Alcatel). ISO 9001 / 14001 / 45001 Internal Auditor & working knowledge of TS16949, ANSI/ESD S20.20, applying hands-on Lean methods (line balancing, standard work, VSM). I serve as a direct bridge between Quality, Engineering, and Production on the plant floor. In addition to process optimization, I build custom digital tools and applied AI workflows to automate repetitive tasks, ensure traceability, reduce defects and improve process reliability. Open to relocation and international assignments.

CORE COMPETENCIES & STANDARDS

Root Cause Analysis (RCA) · Closed-Loop CAPA	Line Balancing & Workstation Ergonomics
Value Stream Mapping (VSM) · Standard Work	Internal Auditor: ISO 9001 · ISO 14001 · ISO 45001
Working Knowledge: IATF 16949 · ISO/IEC 17025 · ANSI/ESD S20.20	Quality Tools: FMEA · Control Plans · SPC · CAPA · RCA
Digital Tools & Applied AI	Digital Work Instructions (Paperless)

LANGUAGES & INTERNATIONAL MOBILITY

English: B2 (Professional Working Proficiency — Technical documentation, international audits & Asian supplier coordination) | **Spanish:** Native Language

WHAT I HAVE IMPROVED (PROBLEM → ACTION → IMPACT)

- Alcatel 4007 Line — Problem: assembly-line bottlenecks and station cycle time imbalances. Action: rebalanced Lean line operations and optimized workstation ergonomics. Impact: increased Alcatel 4007 line output by 17%.

- Samsung Microwave Line — Problem: excess labor cost and uneven workstation loading. Action: actively collaborated in Lean line rebalancing and standard task reallocation. Impact: successfully reallocated 3 operator roles, lowering manufacturing labor costs without compromising reliability.

- Closed-Loop CAPA Programs — Problem: repetitive defect patterns in complex electronics manufacturing. Action: led deep root-cause investigations (Ishikawa, 5 Whys) and implemented robust preventive controls. Impact: permanently eliminated recurrence of critical defects across multiple production lines.

- Alcatel 4015 Line — Problem: tactical flow constraints during production ramp-up. Action: stabilized continuous process flow and cycle times. Impact: exceeded planned production by 10%, reducing defect rates and improving process reliability.

- Launch Training Model — Problem: slow operator learning curve during rapid product launches. Action: designed a peer-to-peer 1-on-1 cross-shift coaching program. Impact: reduced training and ramp-up time by 2 days, reaching target production volume and quality standards 2 days ahead of schedule.

- Global Brands Compliance — Problem: demanding, diverse technical quality requirements from international clients. Action: coordinated specifications with Asian suppliers, audited process lines, and enforced APQP control plans. Impact: zero critical customer audit findings and sustained technical sign-off for Motorola, Samsung, Huawei, Sony, and Alcatel.

WORK EXPERIENCE

Quality Management & Continuous Improvement

May 2025 – Present · Full-time · On-site

Grupo BGH

Solving operational problems and improving reliability across 2–3 active production lines:

- **Repetitive shop-floor defects:** Analyzed root causes via 5 Whys/Ishikawa and implemented closed-loop CAPA, reducing defect rates and improving process reliability.
- **Imported component non-conformances:** Identified quality gaps, coordinated corrective actions with Asian suppliers, and redesigned plant traceability controls, preventing line stoppages.
- **Slow manual data logging:** Built lightweight digital tools and automated visual logging workflows, simplifying reporting and eliminating spreadsheet bureaucracy.

ISO 9001 / 14001 / 45001 Internal Auditor

October 2022 – Present (Part-time / parallel function)

Grupo BGH

Executing 2–4 integrated internal audits per year according to corporate audit plan:

- **Compliance gaps and redundant paperwork:** Analyzed operational processes during integrated audits and implemented actionable findings, securing full compliance and simplifying procedures.
- **Safety and quality process deviations:** Identified operational risks and coordinated closed-loop corrective action plans with area leads, reducing recurrence and strengthening prevention.

Process Technician | Manufacturing Process & Workstation Design

August 2019 – February 2024

Grupo BGH

Manufacturing process design, workstation layout, line balancing, and operator training:

- **Assembly line flow instability:** Redesigned process flows and implemented Statistical Process Control (SPC) on critical parameters, improving repeatability and reducing downtime.
- **Cross-shift operational variability:** Designed workstation layouts, simplified work instructions, and conducted hands-on standardized work workshops, training shop-floor operators and reducing defects.
- **Operational digitization (paperless shop floor):** Implemented digital Work Instructions (WIs) directly at workstation displays, replacing paper binders and ensuring operators always access the latest approved version.

Process Technician — Metrology & Engineering Laboratory

February 2017 – August 2019

Grupo BGH

Relocated to Metrology & Engineering Laboratory following the closure of the Mobile Phones division. Calibration under ISO 17025:

- **Measurement drift in high-frequency equipment:** Calibrated RF generators, GPS systems, and Hi-Pot testers under ISO 17025, securing uninterrupted traceability and reducing measurement uncertainty.
- **Adherence to calibration schedules:** Rigorously followed established preventive calibration schedules and reference checks, preventing line stoppages due to out-of-tolerance instruments.

Process Technician | Acting Process Engineering Responsibilities

March 2014 – February 2017

Grupo BGH

Assumed process engineering responsibilities after the Process Engineer position became vacant, leading the industrialization and launch of 10+ Alcatel smartphone models:

- **10+ model launches (highlighting 4007 & 4015):** Designed assembly flows and line balancing for over a dozen phone models; increased line output by +17% on Alcatel 4007 and +10% on 4015 through Lean line balancing and ergonomic optimization.
- **Training & ramp-up acceleration (-2 days):** Designed and implemented a peer-to-peer 1-on-1 cross-shift coaching program, reducing training and ramp-up time by 2 days and reaching target production output and quality standards 2 days ahead of schedule.
- **Assembly line stabilization:** Implemented continuous balancing guidelines, standard cycle times, and ergonomic improvements, sustaining high reliability across mobile phone lines.

NPI Quality Analyst (New Product Introduction)

May 2012 – February 2014

Grupo BGH

Quality assurance across 11–15 New Product Introduction (NPI) launches for Motorola, Huawei, ZTE, and Samsung Microwave:

- **Samsung Microwave labor optimization (-3 operator roles):** Actively collaborated in cycle time analysis and standard work reallocation, contributing to the efficient reallocation of 3 operator stations without compromising reliability.
- **Technical discrepancies with suppliers in China:** Translated English engineering specifications and coordinated component non-conformity resolutions directly with suppliers in China for Motorola, Huawei, and ZTE launches.
- **Deviation risks on new models:** Audited industrialization ramp-ups under ISO 9001 and ISO/TS 16949, identifying and closing operational gaps before mass production start.
- **Inspection guidelines & control plans:** Built Control Plans, visual inspection work instructions, and participated in PFMEAs, securing critical parameter control.
